

Project Plan.

The choice of game: Brainteaser. The Stroop Effect

The Stroop Effect is a well-known psychological phenomenon that challenges how we name physical colors when they are used to spell the name of a different color. Test shows how quickly our brain responds to the task.

1. User is supposed to select correct color of the word not the name of the word. Function generates random text with random color.
2. User will be timed, so questions must answer quickly. Generate time counting I will be use
3. User starts to play the game by pressing play button. Generating for this functionality I will use Event Listener.
3. I have created the main folder and inside in it I have different three folders (JS, CSS, IMG) to keep my JS and CSS code clean and more readable.
